

# Course Summary for "Remote sensing and GIS with focus on the environment" vt 2021

Course coordinator:

Teachers in the course: Micael Runnström, Helena Elvén Eriksson, Abdulghani Hasan, Tristan Bakx.

Number of students: 8 registered students

Grade distribution: 0 st UK, 3 st G, 5 st VG.

## Evaluation

### Summary of the course evaluation

Number of survey responses: 6, of which is 75 % of the students

Short summary of the evaluation responses: In general the students were very satisfied with the course (overall score of 3.8, on a scale 1-5). The students were particularly satisfied with lectures and exercises. Due to Covid-19 the course was held 100% on-line. This is of course difficult for the students as there are quite a lot of topics to go through. So the course is getting marks that the work load is on the heavy side for a 15 credit course.

### Comments from the teaching team

Teachers' opinion is that the course went well.

### Evaluation of changes implemented since the last time the course was given

Since the last time some of the practical exercises was updated and the instructions easier to follow. Still it is difficult to do the practical exercises on distance mode as the teacher's supervision through MS Teams is not so easy for the students.

### Suggestions for changes to implement before the course is given the next time

Some of the practical exercises will be further updated making them easier to follow and understand. The course will next time hopefully be fully physical campus teaching.
