

Summary

Internship at Enetjärn Natur 2016

During the first period of the autumn semester 2016, I was an intern at nature Consultant Company Enetjärn Natur in Malmö. At Enetjärn Natur ecologists, geographers, environmental economists, environmental jurists etc. are working with projects regarding challenging land-use issues, with a focus on nature conservation, sustainable community planning and licensing processes. Customers include agencies, organizations and private companies. My working tasks have included participating in meetings and discussion with my colleagues, map making and other GIS-work, report writing, compiling information and participating in inventories. I have also had the opportunity to be project leader, since I was responsible for preparation and writing on a nature value inventory and one investigation of potential impact on national interest area for nature conservation. I have been able to apply knowledge from course in GIS, remote sensing, ecology and nature conservation to my daily work at Enetjärn Natur. During my time as an intern, I have learned a lot about the role of an independent consultant with its challenges and possibilities. I have also gained practical GIS experience, learned about the Swedish standard for nature value inventory, learned about how Swedish environmental law relates to land use issues and nature conservation and a lot more.
