

Project: Cyclostratigraphy in deep time, case study from the middle Ordovician and Silurian of Baltica. 01 Nov 2017 – 31 Jan 2018

Summary:

Doing an exchange study or an internship abroad is one of the best ways to learn and get new experiences. The possibility and the support I got from the department to do this internship express the deep understanding and believe of the department of the physical geography and ecosystem at Lund University in exchanging ideas and experiences. During my internship at Copenhagen University I did learn new methods and approach to study the paleo-environmental changes that took place during the Great Ordovician Biodeiversiscation Event (GOBE) which is an important interval in earth history and got the chance to meet very high skilled researcher in this area.
